How to use

Provide to growing calves from 3 to 6 months or up to 230 kg live weight, in addition to the available feedstuff feed. Urea should only be given to animals with functional rumen. The maximum dose of urea should be achieved progressively. The maximum urea content should only be given to animals as part of a regime rich in readily digestible carbohydrates and reduced in soluble nitrogen. Ureic nitrogen should account for no more than 30% of the total nitrogen in the daily feed.
